### Medium Tumbled Lava Stones

Our Medium Lava Stones delivers an all-natural and modern alternative media for both fire pits and fireplaces. These stones are incredibly easy to maintain, hardly any upkeep is required and the best part, no assembly is required. Simply pile on the stones in your desired location and enjoy them.

Each lava stone ranges between 1" - 2", this gives your flames more room to breathe through, giving you more heat to enjoy.

American Fire Glass prides itself on providing high-quality and lifetime-lasting products. That's why we offer a Lifetime Warranty on our Lava Stones.

### Medium Tumbled Lava Stones Specifications

Lava stones are the byproduct of volcanic lava that is hardened by the cool waters of the ocean. Once harvested, they undergo a smoothing process called 'tumbling' that ensures that the quality of the stones will last a lifetime. Being volcanic, these stones can withstand extreme temperatures and can emit more heat than traditional media, keeping your days by the fire longer and warmer.
